

Design better together

Get the visual planning tool that keeps preconstruction and design teams on time and on budget.

Nialli™ Design Planner

Apply the principles of lean and the Last Planner System® in the preconstruction phase of a project. Nialli Design Planner helps teams visualize conversations while working together to design and plan a building project.

Full remote access

Give design teams the flexibility to work exactly how they need, whether colocated, distributed or hybrid. Nialli Design Planner works with different kinds of tech products – including large interactive walls, displays and laptops. Connect and contribute from anywhere.

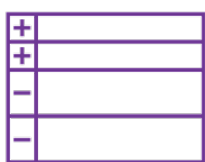

Visualize conversations

Make commitments self-evident and see dependent activities in the context of the entire project, whether colocated or distributed.

Keep things simple

See value on day one and avoid adoption barriers, thanks to tools based on the Last Planner System and familiar sticky-note processes.

Manage constraints

Take advantage of intuitive visual signals to better identify constraints and spot potential delays.

Capture insights

Use in-app reporting to track team performance and facilitate continuous improvement, or export data into tools like Microsoft® Power BI.

INTERACTIVE WALL

Collaborate on a large scale

Complete your pull planning solution with an interactive wall that takes the traditional big wall experience into the digital world. Its huge surface offers precise 40-point multitouch and highly flexible configurations – letting you keep what you love about your paper processes while adding digital flexibility.
